

RaphCare mobile update (v1.8.0+12)

Android patient app build **1.8.0** (install code **12**). File name: `RaphCare-v1.8.0+12.apk`. This build talks to the staging API, not a phone on localhost.

Why this build: release cut for **1.8.0**. Mental health on the phone now includes PHQ-9 and GAD-7 self-check questionnaires, alongside the mood check-in you already had.

Added

- PHQ-9 and GAD-7 questionnaires on the Mental health screen (needs a selected clinic).
- Answers save to the hospital chart so staff can see them.

Updated

- Version label **1.8.0** and install code **12**.
- Mood check-in and insight copy still work the same way.

Install

1. Uninstall any older RaphCare build if Android blocks the update.
2. Copy `RaphCare-v1.8.0+12.apk` to the phone (USB, Drive, or email).
3. Allow install from that source if Android asks.
4. Sign in as the demo patient: `demo.patient@raphcare.com` (password on the demo accounts sheet).

This is for sideload testing, not the Play Store.

What to try

1. Sign in as the demo patient.
2. Open **Mental health**. Log a mood as before.
3. Start a **PHQ-9** or **GAD-7**, answer every item, and save.
4. Confirm the score summary shows after save.
5. Open Health records, Devices, and Book appointment to confirm they still open normally.

Related

Wider product status (staff chart assessments, therapy notes, AI note draft on Portal) stays in the dated partner updates. This note is only what changed in the phone APK.
