

RaphCare mobile update (v1.8.1+13)

Android patient app build **1.8.1** (install code **13**). File name: `RaphCare-v1.8.1+13.apk`. This build talks to the staging API, not a phone on localhost.

Why this build: clearer Active clinic picking, richer icons across the app, Home shortcuts that open the right tabs, and easier Medical information entry.

Fixed

- Home taps that should open Appointments, Records, or Insurance now switch those tabs reliably.
- Active clinic no longer dumps every hospital on open (that list looked like membership). You search or enter a code; only the active clinic on this phone is highlighted.

Added

- Medical information: common allergy and chronic-condition chips, plus an Other box for anything not listed.
- Blood type picker includes Unknown / Prefer not to say.

Updated

- Icons use the same vibrant teal wells and thicker line icons on Home, Profile, Settings, and register.
- Bottom tab label shortened to **Appts** so it fits on a phone.
- Profile row renamed to **Active clinic** with clearer copy about what search means.
- Version label **1.8.1** and install code **13**.

Install

1. Uninstall any older RaphCare build if Android blocks the update.
2. Copy `RaphCare-v1.8.1+13.apk` to the phone (USB, Drive, or email).
3. Allow install from that source if Android asks.
4. Sign in as the demo patient: `demo.patient@raphcare.com` (password on the demo accounts sheet).

This is for sideload testing, not the Play Store.

What to try

1. Sign in as the demo patient.
2. On Home, tap Health Records, Insurance, and Appointments. Confirm each tab opens.

3. Open Profile, Active clinic. Confirm no full hospital list until you search. Set the demo clinic with a code or search.
4. Open Medical information. Pick a blood type (or Unknown). Tap allergy and chronic chips, add Other text, save.
5. Scroll Home for the new icon wells and open Connected Devices or Ask AI Assistant.
