

RaphCare mobile update (v1.8.2+14)

Android patient app build **1.8.2** (install code **14**). File name: `RaphCare-v1.8.2+14.apk`. This build talks to the staging API, not a phone on localhost.

Why this build: Home should show your real appointments, claimed watches, and synced vitals, not sample doctor or fake numbers.

Fixed

- Home no longer shows a demo doctor (Dr. Ngozi) or fake heart rate and blood pressure.
- Join Consultation only appears for video-style appointments.

Updated

- Upcoming uses your next real appointment, or a clear empty state with a book link.
- Connected Devices lists watches you have claimed (model and serial). Empty when none.
- Health Summary shows latest synced heart rate and oxygen when the watch has uploaded readings. Empty until you sync.
- Version label **1.8.2** and install code **14**.

Install

1. Uninstall any older RaphCare build if Android blocks the update.
2. Copy `RaphCare-v1.8.2+14.apk` to the phone (USB, Drive, or email).
3. Allow install from that source if Android asks.
4. Sign in as the demo patient: `demo.patient@raphcare.com` (password on the demo accounts sheet).

This is for sideload testing, not the Play Store.

What to try

1. Sign in as the demo patient.
2. Open Home. Confirm Upcoming is either a real booking or the empty message (not Dr. Ngozi).
3. Open Devices, claim or sync a watch if you have one, return to Home. Confirm Connected Devices and Health Summary match what you synced.
4. Book a video appointment if you can, then confirm Home shows it and Join Consultation appears.
