

RaphCare mobile update (v1.7.0+11)

Android patient app build **1.7.0** (install code **11**). File name: `RaphCare-v1.7.0+11.apk`. This build talks to the staging API, not a phone on localhost.

Why this build: release cut for **1.7.0**. It ships with the current Ops and Portal staging stack. Watch (HBand) libraries stay in the package so Connect can still use the real band handshake.

Updated

- Version label **1.7.0** and install code **11** so this APK matches the release cut.
- Still includes the vendor watch libraries used by E580 and E585 style bands (same as the 1.5.2 line).

Install

1. Uninstall any older RaphCare build if Android blocks the update.
2. Copy `RaphCare-v1.7.0+11.apk` to the phone (USB, Drive, or email).
3. Allow install from that source if Android asks.
4. Sign in as the demo patient: `demo.patient@raphcare.com` (password on the demo accounts sheet).

This is for sideload testing, not the Play Store.

What to try

1. Sign in as the demo patient.
2. From Home, open **Book appointment**. The form should open and stay open.
3. Open the chat assistant and send a short wellness question. You should still get a real reply when staging AI is on.
4. Open **Devices & wearables**. Bluetooth scan and Connect should still be available for supported bands.
5. Open Health records, Profile, and related screens. Confirm they open without the app closing.

Related

Wider product status (Ops, Portal, cloud AI, checklists) stays in the dated partner updates under the partner-updates folder. This note is only what changed in the phone APK.
