

Practices and hospitals pay for the software. Patients pay for extra care, or a programme pays for them. Watches sit on a monthly care plan, not a one-off gadget sale.

List prices below. They exclude tax. South Africa is billed in rand. Congo is billed in US dollars (private hospitals there already work that way). A 12-month term is the default.

Practice and hospital software, billed per site each month

Plan	South Africa	Congo	What they get
Practice	R 1,990	\$ 49	One solo GP or small rooms practice. Outpatient admin, appointments, visits, patient chart. Consult waiting display (call the next person into the doctor). Up to 3 staff (doctor plus front desk). No beds, no pharmacy pickup counter.
Clinic	R 3,490	\$ 89	One site. Outpatient admin, appointments, visits, patient chart. Consult waiting display. Up to 8 staff.
Hospital	R 9,990	\$ 249	Everything in Clinic, plus beds, ward notes, collection counter, pickup waiting screen, discharge invoice, occupancy numbers, casualty queue, theatre list, outbound referral tracking. Nurse job. Up to 25 staff.
Network	From R 19,990	From \$ 499	Multiple sites. Quoted. Shared patient index and reporting as we switch that on.

Extra staff seat: **R 249** or **\$ 8** per month. No setup fee if they prepay the year.

Practice is for independent doctors who run their own rooms. RaphCare does not place shared doctors into hospital patient lists.

Two waiting displays: A **consult waiting display** is for the next person to see the doctor (receptionist or doctor taps Call next). A **pickup waiting screen** is for pharmacy or lab ready codes on a TV. Practice and Clinic include the consult display. The pickup screen stays with the Hospital collection counter.

Patient app care plans, billed per person each month

Who pays: Free costs nothing. Essential Care and Complete Care are paid by the **patient**, or by a **programme that covers that person** (their practice or clinic, an employer, a medical scheme, or an NGO). The list price is the same either way. Practice, Clinic, Hospital, and Network software fees do **not** include these care plans.

Plan	South Africa	Congo	What they get
Free	R 0	\$ 0	App, health records, book at their clinic, pickup codes.
Essential Care	R 149	\$ 6	Reminders, longer device history, priority messages.
Complete Care	R 299	\$ 12	Everything in Essential, plus video-visit credits and family sharing when that ships.

Keep Free real. People should not pay only to see their file. Early sales prefer a programme invoice for a named list of people. Direct patient card or mobile-money pay can follow.

Care packages with a watch, billed per person each month

Sold to a practice, clinic, employer, medical scheme, or NGO for a group of patients. Hardware is included on a 12-month term.

Package	South Africa	Congo	What they get
Health Track	R 189	\$ 9	E580 or E585 band, heart rate and oxygen in the app and on the clinic chart.
SafeCare	R 399	\$ 18	Y6 Pro 4G watch, SOS and fall alerts, SMS to emergency contacts, clinic emergency board. SIM included.

If the plan ends in the first year, the watch stays with RaphCare and can go to the next patient. After 12 months, say so in the contract if they keep it.

A private patient can buy the same packages at these prices. Essential Care without a watch stays R 149 or \$ 6.

Extra usage when the included bundle runs out

Item	South Africa	Congo
Extra video visit	R 89	\$ 4
Clinic AI add-on for summaries and chat, per site each month	R 1,490	\$ 39

SMS and emergency texts beyond the plan bundle are billed at cost. Do not bury an unlimited SMS promise in a cheap plan.

How to sell this

1. **South Africa now:** invoice solo GPs on Practice, and sites on Clinic or Hospital. Sell Essential Care or Complete Care as a programme invoice for a named list, or later as a patient pay. Use Health Track or SafeCare when a site (or a scheme) will enrol a named group.
2. **Congo next:** same practice and hospital plans, quoted in dollars. Do not launch a consumer card checkout first. Sell programmes (a practice, clinic, church, NGO, or employer paying for a list of patients). Patient mobile money can follow.
3. **Do not discount the watch to win the software deal.** The band is cheap. The month of monitoring is the product.

These figures are for partner discussion. Live card and mobile-money collection is not on yet. South Africa VAT is 15%. Congo tax is set on the local invoice when we have a local billing entity.
