

RaphCare partner update (28 Aug 2026)

Here is a summary of what I did today on the clinic portal (staff admin). This is a layout change for hospital work, not a new patient-app feature.

1. Opening a hospital hides the left menu

The left menu is for platform work: dashboard, the list of hospitals, and register hospital.

Once you open a specific hospital, that menu was taking space and competing with the hospital tabs (Overview, Facilities, Patients, Providers, Appointments, Devices, Inpatient, Staff). Appointments even appeared in both places.

The left menu now hides when you are inside a hospital. The hospital tabs are the navigation that matters. Those screens get more room.

2. How staff get back

The top bar now carries the way out, plus the account controls that used to sit in the left menu.

- The RaphCare mark goes to the dashboard.
- **All hospitals** goes back to the hospital list. Register hospital is still on that list.
- The current hospital name stays visible.
- Language and **Sign out** sit in the top bar on these pages.

If someone looks after more than one hospital, the hospital switcher in the top bar still works.

3. Partner checklist

I updated the partner status board so this is easy to see:

- New row: **Opening a hospital** (Done).
- First item under **What to try this week** is this check.
- Overall completion is now **75%**. Hospital admin stays at **100%**.

Still to confirm

1. Open a hospital in admin and confirm the left menu is gone.
2. Use **All hospitals** in the top bar to return to the list.
3. Confirm language and sign out still work from the top bar.
4. If you have more than one hospital, switch hospitals and confirm you land in the new one.

The full product status board is still the partner checklist. Today did not add new patient-app screens.

Thanks,
Daskana
