

RaphCare mobile update (v1.8.4+16)

Android patient app build **1.8.4** (install code **16**). File name: `RaphCare-v1.8.4+16.apk`. This build talks to the staging API, not a phone on localhost.

Why this build: make it clear which hospitals are really linked to your record, versus directory search for Active clinic.

Added

- **Hospitals linked to me** on Active clinic: hospitals from your care links (registration, staff grant, visits). Tap one to make it active on this phone.

Updated

- Active clinic copy explains the difference between linked hospitals and name search.
- Version label **1.8.4** and install code **16**.

Install

1. Uninstall any older RaphCare build if Android blocks the update.
2. Copy `RaphCare-v1.8.4+16.apk` to the phone (USB, Drive, or email).
3. Allow install from that source if Android asks.
4. Sign in as the demo patient: `demo.patient@raphcare.com` (password on the demo accounts sheet).

This is for sideload testing, not the Play Store.

What to try

1. Sign in as the demo patient.
2. Open Profile, Active clinic.
3. Confirm **Hospitals linked to me** shows the demo clinic (or an empty message if none are linked).
4. Tap a linked hospital and confirm it becomes Active on this phone.
5. Search still finds hospitals by name without pretending those results are membership.
