

RaphCare mobile update (v1.6.0)

Android patient app build **1.6.0** (install code **10**). File name: `RaphCare-v1.6.0+10.apk`. This build talks to the staging API, not a phone on localhost.

Why this build: the chat assistant can now give a real reply from the hospital's cloud AI, and the Android crash fixes from 1.5.1 are included.

Added

- **Chat assistant:** send a short wellness question and you should get a real reply, plus the medical disclaimer. This is not a doctor. For urgent symptoms, contact a clinician or emergency services.

Fixed

- **Book appointment** no longer closes the app when you open it from Home or Appointments (from 1.5.1).
- Safer loading on many screens. If something fails to load, the app should stay open and show an error where it can, instead of exiting.

Install

1. Uninstall any older RaphCare build if Android blocks the update.
2. Copy `RaphCare-v1.6.0+10.apk` to the phone (USB, Drive, or email).
3. Allow install from that source if Android asks.
4. Sign in as the demo patient: `demo.patient@raphcare.com` (password on the demo accounts sheet).

This is for sideload testing, not the Play Store.

What to try

1. Sign in as the demo patient.
2. Open the chat assistant and send a short wellness question. You should get a real reply, not the old placeholder.
3. From Home, tap **Book appointment**. The form should open and stay open.
4. Open Health records, Devices, and Profile. Confirm those screens still open without the app closing.

Related

Wider product status (web admin, Hospital plan, checklists) stays in the dated partner updates under the partner-updates folder. This note is only what changed in the phone APK.
